

Care Partners Program

Did You Know?

More than 15 million Americans provide unpaid care for people with Alzheimer's or other dementias.

Every 66 seconds someone in the U. S. develops Alzheimer's disease.

African-Americans are about twice as likely to have Alzheimer's or other dementias as older whites.

Hispanics are about one and one-half times as likely to have Alzheimer's or other dementias as older whites.

Approximately, two-thirds of caregivers of Alzheimer's are women, and 34% are age 65 or older.

If you are caring for a loved one with Alzheimer's or other dementias, you might be eligible to take part in a research study that Weill Cornell Medicine is conducting. You will learn strategies to reduce stress, enhance caregiving skills, and improve overall well-being. Your loved one will receive cognitive training or mental stimulating exercises.

The study has a duration of 12 months. You and your loved one can participate from the comfort of your home at no cost. You will receive a laptop with Wi-fi capability during study participation to access study-related material and content. You will also receive financial compensation for your time and effort.
